

WIA Chipping Day wait time is directly affected by the way the brush is loaded on the truck and trailer. Prior chipping events had a large number of loads that took a disproportionate amount of time to unload due to the style of loading, leading to a long wait time. Please follow the below guide to reduce wait time. Please call 719-488-2693 x 4 with questions.

- Place all branches/brush/slash butt end (large end) towards the back of the truck or trailer. Please keep them all in the same approximate line/orientation. This facilitates removing the brush in one large unit.
- Place larger pieces of brush on the bottom of the load. This facilitates removal of the brush in one unit. Pile smaller pieces on top of the larger pieces.
- Do not load branches crossed at 90 degree angles, stuck vertically through the top, or otherwise out of plane. This makes unloading difficult and time consuming.
